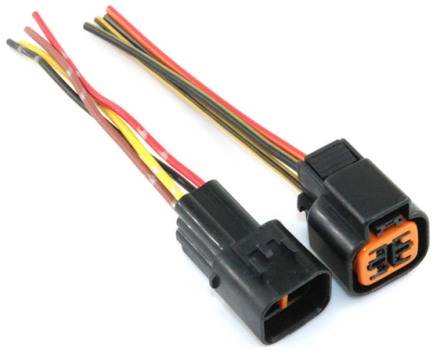
800G Optical Module 40G Alternative Solution



Overview

DML (Directly Modulated Laser) skips the separate modulator and just varies the drive current to encode data. Simpler, cheaper, but noisier over distance. In practice: DML handles 2-10 km links at up to 25 Gbps just fine. For longer distances (10-80 km) or higher speeds, you need EML. The next key development is 800G, and the industry is already gearing up to deploy this next generation of client optics in hyperscale data centers. Developments in three distinct areas are needed for 800G deployment: optical modules and direct attach copper (DAC) cables, switch ASICs, and 800GE. Majority of the switch ports in AI back-end Networks to be 800 Gbps in 2025 and 1600 Gbps in 2027, showing a very fast migration to the highest speeds available in the market. But pluggable modules still. • Demand surge - Global shipments of 800G+ optical transceivers are expected to hit 24 million units in 2025, then jump 2. 6x to nearly 63 million units in 2026. • Nvidia's EML capacity lock-in - Nvidia has pre-allocated production capacity at major EML suppliers (Lumentum, Coherent/Finisar. Several years ago, hyperscale network operators saw an opportunity for coherent Dense Wavelength Division Multiplexing (DWDM) transport optics to plug directly into routers for 400 Gbps Data Center Interconnections (DCIs) with reaches up to 120km.

800G OpenZR+

Now the industry is looking to the OpenZR+ MSA group for guidance addressing similar applications with 800G coherent optical transceivers in small form-factor pluggable modules.

QSFP Optical Module Guide: 40G to 800G Evolution & Selection

From the initial 40G to today''s 800G, the QSFP family has continuously evolved, driving the iterative upgrades of high-speed networks like Ethernet and InfiniBand. This article provides an in

800G Optics Options

The modulator chirp can be optimized for each channel and for a given maximum reach. Below, the black curve shows baseline performance, and the blue and red curves show optimization for Ch1 and

Comprehensive Guide to High-Speed Optical Transceivers: 40G to

Whether you''re upgrading your network or planning a scalable AI infrastructure, selecting the right optical transceivers is fundamental. From QSFP-40G for legacy support to QSFP-DD 800G for

800G Optical Module Solution for Data Center

With the expansion of business scale, data centers are facing increasing data processing demands, many large Internet companies need to build new 800G data centers or upgrade their own data

High-Speed PCB Solutions for 400G and 800G Optical Modules

With extensive experience in high-speed PCB fabrication and optical communication manufacturing, KingsunPCB offers reliable turnkey solutions for next-generation 400G and 800G
