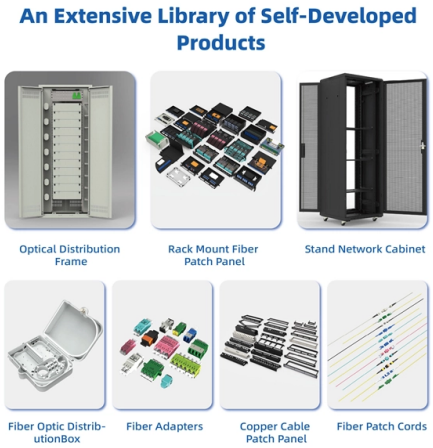
# Huawei AI Server Development



## Overview

Now, at the Huawei Connect 2025, the firm has announced new iterations of its 'SuperPoD' AI clusters. These will be the Atlas 950 and the Atlas 960, with the earlier one featuring the new Ascend AI chips, and interestingly, will compete with NVIDIA's Rubin lineup. AI Compute Service offers instant access to immense yet cost-effective AI computing power, a reliable platform for training and running models and algorithms, E2E cloud-based toolchains, and a robust AI ecosystem, with support for all major open-source foundation models. Instant access to immense. The impressive debut of DeepSeek-R1 back in January gave all Chinese people a taste for AI during the Spring Festival. Model training professionals have pulled all-nighters, working to adjust their training methods and reproduce DeepSeek's results. At Huawei, we have felt the impact, too. So China can resource internally all the computing power it needs to pursue AI development. Huawei MCP Server is a Model Context Protocol server built on Huawei Cloud services, providing secure and controlled cloud access capabilities for large AI models. The Chinese AI firm has been at the forefront of competing with NVIDIA in China's AI market, particularly with rack-scale. Tech giant Huawei unveiled new AI infrastructure meant to help boost compute power and allow the company to better compete with rival chipmaker Nvidia.
