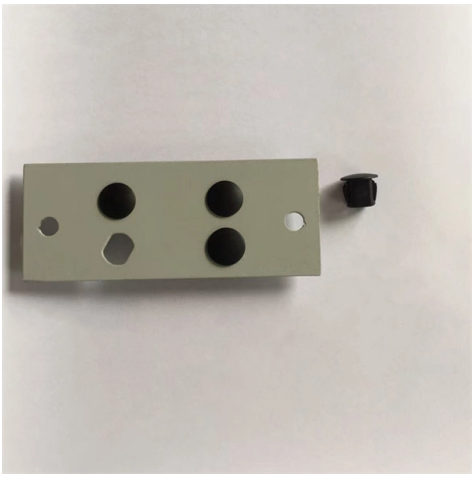
Austrian Coherent Optical Module OSFP



Overview

Designed for high thermal capacity, electrical scalability, and forward compatibility, OSFP modules now drive connectivity across 400G, 800G and the emerging 1. Cisco QSFP-DD and OSFP 800G ZR/ZR+ digital coherent optics modules enable 800G traffic over amplified Dense Wavelength-Division Multiplexing (DWDM) links up to 120 km for 800ZR and over 1000 km for 800G ZR+. This whitepaper highlights the key aspects and features of each solution with the expectation that both solutions will have a place in future data center applications. The OSFP-XD solution has attracted significant interest in. Nokia's CSTAR family of coherent silicon photonic optical engines provide a compact, eficient optical front-end solution for modern 100G – 400G coherent optics modules. Ideal for use in QSFP-DD, OSFP, and CFP2-DCO pluggable modules, as well as in fixed optics transponder cards, Nokia CSTAR engines. OSFP Coherent Optical Module by Application (Data Center Interconnect, Long-Haul Network, Metropolitan Area Network, Other), by Types (200G OSFP Coherent Optical Module, 400G OSFP Coherent Optical Module, Other), by North America (United States, Canada, Mexico), by South America (Brazil, Argentina. The Lumentum 400ZR module on an OSFP form factor is designed for use by hyperscale data center operators and peering networks to provide high bandwidth interconnections in an industry standard, interoperable footprint. Capable of transmitting 400 Gbps over 120 km, Lumentum OSFP 400ZR coherent. As hyperscale data centers shift toward AI-optimized fabrics and ultra-high-bandwidth switching platforms, the OSFP (Octal Small Form-Factor Pluggable) form factor has become central to next-generation optical architectures.
