Cable Bundling Methods in Distribution Boxes

Overview

This guide compares five bundling methods head-to-head: nylon cable ties, stainless steel cable ties, lacing cord, spiral wrap, and edge clips. Cable ties: These simple but effective tools are probably the best-known method of bundling cables. They are particularly popular in permanent installations where no regular changes need to be. This section describes the general methods and requirements for cable routing and binding. In an equipment room installed with supports and ESD floor, cables can go through the interlayer (the space between the concrete floor and the ESD floor) or the cable trough. If the cables are led out from. tect wires and their passage openings. However, they can be difficult to remove and reuse, and over-tightening can damage cables.
