Cable tray corresponding crossarm specifications

Overview

Galvanized Crossarms for Cable Trays: Analysis of Functions, Galvanized crossarms for cable trays are typically made of Q235 low-carbon steel via rolling.

Key Takeaways

Cable tray support crossarms are typically made of galvanized steel, with U- or L-shaped cross-sections, thicknesses of 2. 5–4 mm, lengths matching tray width, and designed to meet static and dynamic load requirements.

Material and Construction

Cable tray crossarms are generally fabricated from Q235 low-carbon steel and finished with hot-dip galvanization to resist corrosion, including passivation via chromate treatment to seal zinc pores. Cross-sectional shapes are usually U-shaped or L-shaped, providing structural rigidity while supporting cable trays.

Dimensions

Thickness: 2. 5 mm, 3 mm, or 4 mm depending on load requirements. Length: Matches the width of the cable tray, commonly 300 mm, 400 mm, or 500 mm.

Flange width: For heavy-load applications, flange widths are increased to 60–80 mm.

Load Capacity

Crossarms must support both static and dynamic loads: Light-duty trays (control cables): 50 N/mPower cable trays: 150–200 N/mHeavy-duty industrial trays (e.g., metallurgical workshops): >300 N/m, requiring stiffened structures. Deflection limits are specified as ≤ L/200, meaning a 1000 mm span should not sag more than 5 mm.

Support Spacing

Crossarms are bolted to cable tray connectors, forming support nodes with spacing between 500–1000 mm. For optimal system performance, 1/4 span support placement is recommended to minimize stress and deflection at splice locations. Standards and ComplianceGB 50217: Code for Design of Cables in Electric Power Engineering, specifying deflection and load requirements.

DIN E

N 61537: Defines cable support systems, including materials, installation, and environmental considerations.

NEMA B

I 50015/50016: Guidelines for cable tray support locations and installation practices.

Installation Notes

Crossarms are fixed to cable tray connectors using bolts, ensuring secure attachment. For heavy-duty applications, stiffened crossarms with wider flanges are recommended. Proper galvanization and inspection ensure long-term durability in industrial environments.

By following these specifications, cable tray support crossarms can safely support electrical and communication cables while complying with international standards.

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Cable Tray Technical Guide A practical guide to product selection and ...

In designing supports for a cable tray system, consideration should be given to the loads associated with future cable additions and any additional loading that may be applied to the cable tray system (e.g.,

26 05 36 Cable Trays for Electrical Systems

Description: This product category covers metal cable trays and metal cable tray systems intended for field assembly and for use in accordance with Article 392 of NFPA 70.

Specifications of integrated crossarms for cable trays ...

Eaton Cable Tray System Specifications This document outlines the specifications for the installation of complete cable tray systems, including types, materials, and components required.

CABLE TRAY SYSTEMS GUIDE

The design and cost of the cable tray is greatly affected by this designation. In order to determine the most appropriate and economical system, a class should be selected that reflects the actual total

Cable Tray Technical Specifications | PDF | Galvanization ...

The document provides a technical data sheet for cable trays including ladder and perforated types. It lists specifications for material, thickness, dimensions, loading capacity, fittings and accessories.

CableTray Book English

All calculations and data are based on 36 in. wide cable trays with rungs spaced on 12 in. centers with tray supported as simple spans with deflection measured at the midpoint.

cable tray system

All cable trays are manufactured in accordance with the NEMA standard publication VE 1-3.02 1979, TITLED “Cable Tray Systems”. Thus they meet and/or exceed the loading capability of
