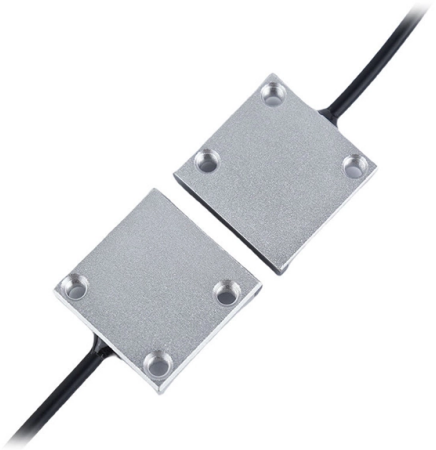
Can fiber optic cables not be folded



Overview

The fibres themselves are not as pliable as copper wires, making them more susceptible to damage when subjected to stress, particularly bending. To avoid damage to your fiber optic cables, follow these guidelines: Do not route the cable along a folding cable-management arm. This inquiry delves deep into the physics of materials, design principles, and practical applications, revealing essential distinctions that shape each cable's functionality and. Do not install a fiber optic cable in a conduit or duct that already contains cabling, regardless of the cable type. Existing or new empty ductwork can be modified to accept several different installations by the placement of innerduct within it. You should pull on the fiber cable strength members only! Never exceed the maximum pulling load rating. On long runs, use proper lubricants and make sure they are compatible with the cable jacket.
