Fiber optic broadband does not require a router

Overview

The short answer is no, you don't necessarily need a special router for fiber optic internet. Fiber internet doesn't need a modem because it uses a fundamentally different technology from cable or DSL. This ONT will translate the optical signal from the service provider into a digital signal which can be read by the router or device. Fiber internet is different from regular internet services. Fiber optic cables send data using light pulses, which are already digital. This means we don't have to change the signals. Your devices talk digitally, so there's no need to adjust or change the. Here's the quick answer: fiber internet does not require a traditional modem. Instead of a modem, fiber connections require an Optical Network Terminal (ONT), a device that converts fiber signals into an Ethernet connection.
