Cost-effective flame-retardant data center racks

Overview

5 Key Components in Data Centers That Require Flame In this blog, we'll explore five critical components in data centers that require flame-retardant plast.

Key Takeaways

Flame retardant data center racks typically range from $800 to $3,500 per unit, depending on size, material, and customization options.

Overview

Flame retardant data center racks are designed to protect critical IT equipment from fire hazards while providing structural support and cable management. Prices vary based on height, width, depth, load capacity, and additional features such as perforated doors, side panels, and integrated thermal management. Standard 42U racks are commonly used in enterprise data centers, while smaller 24U or 18U racks are suitable for edge computing or server rooms.

Price Range

Basic flame retardant racks: $800–$1,500 Typically open-frame or standard enclosed racks with basic fire-resistant coatings. Mid-range racks: $1,500–$2,500 Include additional features such as cable management, perforated doors for airflow, and higher weight capacity. High-end or customized racks: $2,500–$3,500+ Fully enclosed, modular, or high-density racks with advanced fire-retardant materials, integrated containment systems, and optional soundproofing or cooling solutions.
