Can a PoE switch transmit fiber optic cables

Overview

Power over Ethernet (PoE) does not work directly over fiber-optic cables because fiber-optic cables are designed to transmit data using light, and they do not conduct electricity. PoE requires copper cables (such as Cat5e, Cat6, or Cat6a) to deliver both power and data. While that is adequate for installations for a home or small business, large scale. PoE stands for Power over Ethernet, which is an advanced cabling method enabling Ethernet network cable to transmit power at the same time. Overcome PoE limitations with the FiberPoETM. The FiberPoE is a low-cost solution for outdoor deployments that require long-distance runs to reach the PoE device. This allows businesses to connect fiber-optic networks with standard copper Ethernet networks. Omnitron PoE Media Converters, Enterprise PoE Switches, and Industrial PoE Switches enable network distance extension over fiber optic cabling, and provide PoE, PoE+, HPoE, and IEEE 802.
