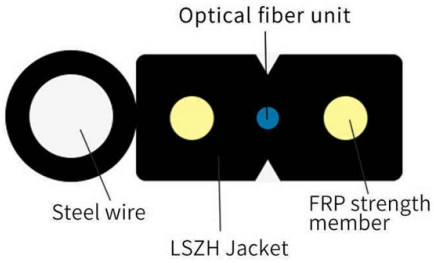
Customization Process for Fiber Optic Cables for Local Area Networks LANs



Overview

To design and customize an enterprise fiber optic cable project effectively, follow a structured approach: gather requirements, design network topology 1], plan cable routing, customize cables, and manage project execution. Fiber optic network design refers to the specialized processes leading to a successful installation and operation of a fiber optic network. It includes first determining the type of communication system (s) which will be carried over the network, the geographic layout (premises, campus, outside.
