Cut-off method for vertical bends in cable trays

Overview

Trunking Cutting Techniques Guide | PDF | Metalworking | ToolsThe document provides instructions for forming various bends and joints in electrical trunkin.

Key Takeaways

The cut-off method for vertical bends in cable trays involves marking the bend points, cutting the tray at calculated locations, and forming the tray to the desired vertical angle while maintaining cable bending radius and structural integrity.

Overview of Vertical Bends

Vertical bends in cable trays are used to change elevation, allowing the tray to route over or under obstacles such as pipes, beams, or equipment. Proper execution ensures smooth cable pulling, prevents damage, and maintains compliance with cable bending radius requirements. Steps for the Cut-off MethodDetermine Bend Angle and Offset: Select the appropriate bend angle based on available space and cable type.

Common angles include 15°, 22. 5°, 30°, 45°, and 60°. Smaller angles (15°–22.

5°) are preferred for thick or high-voltage cables to reduce stress, while sharper angles (45°–60°) are used in confined spaces but may complicate cable pulling. Calculate Cut Points: Measure the vertical offset distance required. Use a multiplier based on the bend angle to determine the distance between cut marks along the straight tray section.

For example, a 30° bend typically uses a multiplier of 2. 0. Mark the cut points clearly on the tray to guide the bending process.

Cut the Tray: For ladder or wire basket trays, cut side rails or wires back to the first complete grid or rung at the marked points. Ensure cuts are clean and free of burrs to prevent cable damage. Form the Vertical Bend: Gradually bend the tray at the cut points to achieve the desired vertical angle.

Maintain the minimum bending radius of the cables to avoid kinking or insulation damage. For wire basket trays, remove only the necessary side wires to allow bending without compromising structural integrity. Secure and Support: After forming, attach the tray to supports using clamps or brackets as per manufacturer guidelines.

Ensure the bend is stable and aligned with the rest of the tray run.

Best Practices

Always plan vertical offsets in advance to minimize sharp bends and reduce cable stress. Use gradual bends whenever possible to facilitate cable pulling. Verify that the cut and bend do not reduce the tray's load capacity or compromise safety.

Follow manufacturer-specific instructions for tray types, as wire basket, ladder, and solid-bottom trays may have different cut-off and bending requirements. By following this method, vertical bends in cable trays can be executed safely, efficiently, and in compliance with industry standards, ensuring smooth cable installation and long-term system reliability.

Configuration methods

G – Vertical bend without a radius (90˚) create a 90˚ vertical bend, remove one section of side wires on each side of the tray at the point where the angle is required and bend into position.

CUTTING GUIDELINE

Hilti''s cordless bandsaw is an appropriate tool for cutting low height, thin metal products such as cable ladders and trays and support channels. Accurate cutting is achieved with low noise and debris.

Cable Tray Offset Calculator | Vertical, Horizontal & Compound Offset

Calculate horizontal, vertical, or compound cable tray offsets based on bend angle, offset distance, and available installation space. Use this tool to estimate sloped section length, horizontal run

Cable Tray Technical Guide A practical guide to product selection and ...

The choice of method should be discussed with a local inspector. The best decision may be to extend only the cables, creating a discontinuity in the cable tray.

How to cut Channels, Cable Ladders and Cable Trays

Following the advice given in this cutting guideline will lead to: increased safety and handling, reduced weight, ease of installation, improved logistics and optimal performance of products.

CABLE TRAY SYSTEMS GUIDE

It is designed for mechanical support and strain relief in long runs of cable and creates a smooth gradual bend for cable. Rail and stringer material is 16 ga steel tubing.

Cable Tray Bend and Offset Formulas | PDF | Galvanization | Screw

The document discusses Metstrut cable tray systems, including their configuration, materials, dimensions, and compliance with industry standards. Key points: - Cable trays have integral

Types of Bends in Wire Mesh Cable Trays: A Detailed

Wire mesh cable trays are widely used in industrial and commercial installations to support and manage cables effectively. One of their greatest

Cable Tray Ladder Trunking Wire Basket Installation Guidelines

© 2026 KENHARDT OPTICAL NETWORKS - All rights reserved

Cable trays are available in different configurations, straight sections are available to route cables in a horizontal or vertical plane. Fittings are available to route cables in various directions in either the

Cable tray manual

Where cable tray wiring systems with current carrying conductors are installed in a dust environment, ladder type cable trays should be used since there is less surface area for dust buildup than in

B-Line series Cable Tray Design Considerations

As an industry leader in cable tray, Eaton offers one of the widest ranges of cable management solutions available in the market today with its B-Line series portfolio. With unmatched quality and service, we

Master the Cable Tray Secret to Perfect Back of Bend ...

How to Master back of bend measurements on electrical Cable Tray. Make a 90 electrical cable tray bend to measurement with a gusset of your choice using one piece of tray.

Method Statement For Cable Pulling and Final Electrical Connections

This procedure covers the method for all the cable pulling, electrical connections and terminations for cables running on cable ladders and cable trays. Electrical method also covers all associated cables

Cable Tray Technical Guide A practical guide to product selection and ...

A practical guide to product selection and installation This guide for engineers and installers has been developed by ABB as a practical reference regarding cable tray characteristics, installation, and

cable tray and trunking for electricians (Page 1) / Help Me ! / Math Is ...

the cable tray is 3 metres in length, this doesnt matter but i think the width does. it is 150mm across. i know that for a sweeping 90 degree bend there are two cuts and two bends. each
