Fiber optic cable fell on the highway

Overview

What to Do If You Encounter Broken FiberDiscover our concise Safety Guide for dealing with broken fiber. Learn crucial steps from securing the area, report.

Key Takeaways

A fiber optic cable fell onto the 15 Freeway in Victorville, California, after being struck by a construction vehicle, causing a temporary closure of all lanes. On November 13, 2024, around 10: 30 a.m., a construction vehicle hit a fiber optic cable just south of Bear Valley Road, causing it to fall across all lanes of the 15 Freeway in Victorville, California, and forcing a closure in both directions for about an hour while crews removed the cable and ensured safety. Adjacent roads, including Mariposa and Amargosa, were also temporarily closed due to the downed cable.

Utility crews, including Spectrum, responded to assess and repair the damaged line. The cable carried communications signals rather than high-voltage electricity, so there was no electrical hazard. Workers cut the cable and cleared it from the roadway, and the freeway reopened around 11: 30 a.m., though traffic delays continued as repairs were completed.

A minor incident occurred when a vehicle traveling southbound on Mariposa Road struck the low-hanging wire, but no injuries were reported. Some Spectrum customers experienced temporary service outages due to the damage. The California Highway Patrol handled the investigation into the incident.

This event highlights the importance of securing fiber optic cables during construction and transport, as loose or improperly handled cables can pose significant hazards to traffic and public safety. Similar incidents, such as spools of fiber optic cable falling from trucks, have caused accidents in other locations, emphasizing the need for strict safety protocols during installation and transport. Motorists in areas with ongoing construction or fiber optic installation should remain alert for potential hazards, follow detour instructions, and report any downed cables to authorities immediately to prevent accidents and service disruptions.
