Fiber Optic Fusion Splicing Cable Laying Stand

Overview

Mobile Splicing workstation Enhance your workflow with the optional fiber enclosure stand, specially designed to secure AFL's Apex® Fiber Optic Splice Clos.

Key Takeaways

A fiber optic fusion splicing cable laying stand is a portable, stable workstation designed to support splicing operations, manage cables, and hold closures or equipment in various field environments.

Overview

Fiber optic fusion splicing stands and workstations are essential for efficient and safe splicing operations. They provide a stable platform for fusion splicers, cleavers, and other tools while allowing proper cable management and access to closures or terminals. These stands are designed for portability, durability, and adaptability to different work environments, including manholes, aerial installations, central offices, and outdoor sites.

Key Features

Adjustable Work Surface: Many stands, such as U-TECK and FiberFox models, feature a work surface that can be detached or elevated using stand-off props and adjustable webbing, allowing work at different heights or over terminal casings. Cable Management: Integrated brackets and FIBER-GRIP systems secure loose fibers, ribbons, tubes, or cables up to 0. 5 inches in diameter, keeping them organized during splicing.

Closure and Equipment Support: Portable stands can hold fiber closures, splice trays, or tablets, ensuring that all components are accessible and stable during operations. Portability and Stability: Lightweight yet durable steel legs, non-slip surfaces, and optional wheels or dolly configurations allow easy transport and setup in tight or elevated spaces. Versatility: Some workstations, like AFL's Mobile Splicing Workstation, can function as a workbench, dolly, scaffold, or creeper, supporting high-count cable installations and field splicing tasks.

Applications

Field Fusion Splicing: Supports single-fiber or ribbon splicing operations, providing a stable platform for fusion splicers and cleavers. Aerial and Bucket Work: Adjustable stands allow technicians to work safely from aerial lifts or attach the workstation to cable support strands. Manhole and Central Office Work: Compact designs fit in narrow spaces while maintaining a comfortable working height for extended splicing sessions.

High-

Count Cable Installations: Optional fiber enclosure stands secure closures during complex splicing projects.

Benefits

Reduces setup time and increases productivity by keeping tools, cables, and closures organized. Enhances safety and ergonomics by providing a stable, adjustable work surface. Supports multiple splicing environments, from indoor central offices to outdoor aerial installations.

Protects fiber integrity by minimizing stress and movement during splicing. Investing in a fiber optic fusion splicing cable laying stand ensures that technicians can perform splicing efficiently, safely, and with minimal downtime, making it a critical component of modern fiber optic deployment projects.
