# Om4 Multimode Bare Fiber

## Overview

With a core diameter of 50/125 µm, OM4 fiber cables support data transmission speeds of 10 Gbps over distances of up to 400 meters, making them an excellent choice for data centers and wide area networks. To recap Optical Fiber can be divided into Multimode Fiber (MMF) and Single-Mode optical fiber (SMF). Multimode Fiber (MMF) has a core diameter, typically 50–100 micrometers, has ability to transfer multiple modes of light through the fiber core, uses lower-cost electronics (LED, VCSEL) operates at. High-Speed Computing switch fabrics Panduit® Laser-Optimized OM4 fibers extend the application of multimode fiber to support transmission at 10 Gb/s (at extended reach) and future speeds such as 40 and 100 Gb/s. When using low cost 850 nm Vertical Cavity Surface Emitting Laser (VCSEL) transceivers. ClearCurve multimode laser-optimized, bend resilient fibers are widely deployed to deliver high data rate, low latency transmission. As the inventor of bend-insensitive optical fiber, Corning ensures quality and reliability by measuring key attributes, including effective modal bandwidth on every. Fiber4u offers OM4 Fiber Cable solutions designed for ultra-high-speed data transmission. All component materials meet the EU RoHS and REACH Directive standards. R&M offers the full range of multimode fibers for all its cables, whether for installations or assemblies. Apart from the OM1 type, all of them are bending-optimized fiber incorporating technology to deliver enhanced macro-bending performance produced by a unique Plasma Chemical Vapor Deposition.
