Energy Big Data Center Guyana

Overview

Cerebras and the Government of Guyana have signed an MoU to build a 100 MW AI data center in Wales, Guyana, powered by a nearby gas-to-energy plant. Guyana's intended AI center will be a direct spin-off of the Berbice gas project, providing stable energy to support large-scale digital infrastructure (Google image) Guyana's first Artificial Intelligence (AI) Data Center will be built in Berbice, powered by energy from the country's second gas. AI chip company Cerebras is to develop a large data center in the South American country of Guyana. The technology firm and the Government of the Co-operative Republic of Guyana this week announced they have signed a landmark Memorandum of Understanding (MoU) to build and operate an artificial. In a bold step toward shaping the future of technology in South America and the Caribbean, the Government of the Co-operative Republic of Guyana (Guyana) and Cerebras Systems have signed a landmark Memorandum of Understanding (MOU) to build and operate a state-of-the-art artificial intelligence. Guyana's plan to host a new artificial intelligence (AI) data center could require as much as 100 megawatts (MW) of electricity. This is roughly 45% of the country's current peak demand of 221 MW. Deploying Cerebras CS-3 supercomputers, the partnership will enable world-class AI research and enterprise applications.
