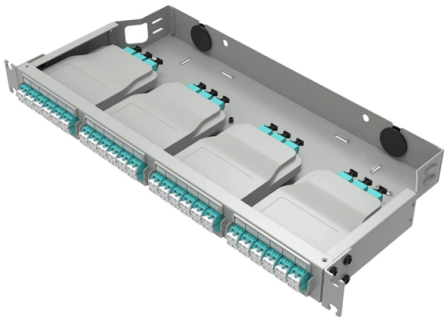
High-voltage enclosed fireproof cable trays



Overview

Designed to meet demanding industrial and commercial requirements, our fire-rated cable tray system ensures safe cable routing and reliable performance in emergency situations.

Key Takeaways

Fireproof enclosed cable trays are specialized systems designed to maintain circuit integrity and protect high-voltage cables during fire, meeting stringent international fire resistance standards.

Overview

Fireproof cable trays and enclosures are engineered to protect electrical cables from fire, heat, and smoke, ensuring that critical systems such as emergency lighting, fire alarms, and smoke extractors remain operational during a fire. These systems are widely used in power plants, oil and gas facilities, rail, utilities, and commercial buildings where high-voltage cable protection is essential.

Key Products and Systems

Durasteel Cable Enclosures: Assessed according to BS EN 1366-5: 2003, these enclosures provide protection from both inside-to-out and outside-to-in fire scenarios. They are suitable for life-safety cables and critical infrastructure.

Cablofil Fire-

Resistant Cable Trays: Tested to the German DIN 4102-12 standard, these trays withstand temperatures up to 1000°C for 30, 60, and 90 minutes. They are compatible with high-voltage cables like Prysmian FP400/FP600 and Draka Firetuf.

Kem

Safe Cable Enclosure System: Offers EI180 fire resistance for integrity and insulation, tested to BS 8519: 2020 and EN 1366-5: 2021. It provides thermal insulation, dimensional stability, and modular installation for high-voltage cables.

Basor Electric Fire-

Resistant Trays: Designed to maintain functionality of critical electrical installations under fire, tested with trays, supports, and cables in controlled temperature-time curves to ensure circuit integrity. Fire Resistance StandardsBS EN 1366-5: Evaluates fire resistance of cable enclosures for both internal and external fire exposure.

DI

N 4102-12: German standard for fireproof cable trays, requiring full-system testing in ovens at high temperatures for defined durations.

B

S 8519: 2020: Specifies requirements for fire-resistant cable systems in buildings, ensuring safety in escape routes and critical areas.

Installation and Performance Considerations

Fireproof trays and enclosures are typically modular, lightweight, and corrosion-resistant, allowing for offsite assembly and on-site adaptation. Accessories such as fire-rated cable cleats are recommended to maintain cable integrity and prevent slippage during fire exposure. Systems are designed to support high-voltage cables while maintaining thermal insulation and structural stability under extreme conditions.

Applications

These systems are essential in environments where cable failure could compromise safety or operations, including: Hospitals, airports, and public buildingsIndustrial plants and refineriesRail and metro tunnelsPower generation and distribution facilities Fireproof enclosed cable trays ensure that high-voltage electrical systems remain operational during fire, protecting both infrastructure and human life while complying with international fire safety standards.

Fire Rated Cable Encasements: Invicta Durasteel

Our 4-hour fire rated cable encasements provide comprehensive fire and blast protection, shielding cables from fire and containing high voltage cable fires

FIRE RESISTANT PROOF CABLE TRAY, DIN STANDARD E90

Cablofil cable tray is the preferred choice for the cable containment of low and high voltage electric cables where fire resistance is crucial - this includes cable basket tray systems for Prysmian FP

DAKEN Fire-resistant Cable Tray

This innovative design not only provides excellent fire resistance, but also effectively addresses the common issues associated with traditional fully enclosed cable trunking systems, such as heat

KemSafe Cable Enclosure System

Kem Safe CES is a proven solution for the protection of low, medium and high voltage cables in the building and construction industry, and a tested solution to

High Voltage Cable Protection: Invicta Durasteel

The use of Durasteel cable protection forms an encasement around the high voltage cable, limiting the spread of a fire and absorbing the impact of an explosion,

Fire Resistant Cable Tray

Designed to meet demanding industrial and commercial requirements, our fire-rated cable tray system ensures safe cable routing and reliable performance in emergency situations.

Fire rated cable enclosures from Aestuver | Aestuver®

Aestuver™ fire rated cable enclosures prevent the transmission of fire from the inside to the outside and protect the surrounding rooms, e.g. escape and rescue

Fire resistant cable tray | Hermi-solutions

Cable trays are intended for the construction of fire-resistant cable paths with surface cable laying. Cable paths are constructed as standard or lightweight

Fireproof Trough-Type (Enclosed) Cable Tray

Fireproof Trough-Type (Enclosed) Cable Tray High Protection Rating: Completely isolates dust, moisture, oil contamination, and external mechanical damage, providing the most comprehensive
