Optical Modules and High-Speed Copper Cable Connectors

Overview

High-Speed I/O Solutions | Copper Cable Assemblies | Active Optic. Amphenol is a technology leader in the design, manufacture, and supply of high-perform.

Key Takeaways

High-speed copper and optical interconnects enable data transmission from 10G to beyond 1. 6T per lane, with solutions optimized for signal integrity, density, and low latency in modern data centers and AI clusters. Copper Cable ConnectorsHigh-speed copper connectors, including Direct Attach Cables (DAC) and Active Electrical Cables (AEC), are widely used for short-reach connections (typically under 5 meters) due to their cost-effectiveness and reliability.

Modern copper solutions, such as QSFP DD, OSFP, and SFP28 assemblies, support data rates from 10G to 400G per link, with PAM4 signaling enabling higher bandwidth per lane. Advanced copper connectors integrate DSPs to extend reach and maintain signal integrity at higher speeds, reducing insertion loss and crosstalk. Examples include Amphenol's micro-LinkOVER and Molex's 112G AEC cables, which provide low VSWR and high SNR for demanding applications.

Optical Modules

Optical modules, including Active Optical Cables (AOC) and pluggable transceivers, are essential for longer distances (from several meters to kilometers) and high-bandwidth applications. Systems like Samtec's FireFly™ Micro Flyover support up to 28 Gbps per lane with a path to 112 Gbps PAM4, offering interchangeable copper and optical connectivity in the same footprint. Optical modules often incorporate PAM4 DSPs, transimpedance amplifiers, and silicon photonics, enabling high-speed, low-latency transmission while reducing power per bit.

Pluggable modules are critical in AI clusters and hyperscale data centers for server-to-switch and switch-to-switch links.

Key Features and Trends

Form Factors: QSFP, QSFP-DD, OSFP, SFP-DD, and micro high-speed edge card connectors allow high-density deployment. Bandwidth: Copper and optical solutions now support 100G, 200G, 400G, and up to 1. 6T per lane with PAM4 signaling.

Signal Integrity: Advanced designs minimize crosstalk, insertion loss, and EMI, with integrated heat sinks for thermal management. Flexibility: Some systems allow interchangeable copper and optical connections using the same connector, simplifying board design and reducing costs. Applications: Data centers, AI clusters, high-performance computing, and distributed architectures benefit from these interconnects for low-latency, high-bandwidth communication.

SummaryHigh-speed copper connectors are ideal for short-reach, cost-sensitive applications, while optical modules excel at longer distances and ultra-high bandwidth requirements. Modern interconnect solutions integrate DSPs, silicon photonics, and advanced form factors to meet the growing demands of data centers, AI clusters, and hyperscale computing environments, providing scalable, reliable, and high-performance connectivity.

Amphenol CS is a global provider of high speed interconnect solutions for internet equipment, infrastructure, enterprise networks, and appliances, that enable performance at the

Optical Interconnect Technology Analysis: LPO, NPO,

NPO, or Near-Packaged Optics, is a highly integrated optical interconnect solution that falls between traditional pluggable optical modules and

Active Optics Cable Assemblies | TE Connectivity

We offer a full line of small form-factor pluggable connectors for 4G, 10G, 25G, 56G, 112g and higher speed applications. Design for the speed you need, today and every day with our comprehensive

FireFly™ Mid-Board Optical Transceivers

Samtec FireFly™ copper and optical cable systems provide the flexibility to achieve higher data rates to 28 Gbps and/or greater distances, simplifying board design

Evolution of Co-Packaged Interconnects

FireFly demonstrates the viability of combining optical and copper lanes in a pluggable module, achieving low-loss channels up to 56 Gbps per lane

CDFP Connector and Cage Assembly | TE Connectivity

Fully compliant with the multi-source agreement (MSA), which specifies a 400 Gbps module, connector and cage that integrate 16 TX/RX channels. MSA specifies

AOC Vs DAC Vs ACC Vs AEC: Complete Guide To

Understand AOC, DAC, ACC & AEC modules in one guide. Compare features, benefits & best use cases to choose the right cable for your

Semtech Data Center Solutions | High-Speed Optical

Whether your infrastructure relies on optical or copper interconnects, Semtech delivers the performance needed for AI workloads, cloud computing and

AI Data Centers Drive Surge in High-Speed Copper Connectors

AI Computing Boom Drives Surge in Demand for High-Speed Copper Connectors Against the backdrop of rapid technological advancement, shares linked to high-speed copper cable

Cisco 40GBASE QSFP Modules Data Sheet
