How to bury temperature-measuring optical cables underground

Overview

Fiber optic cables should always be buried beneath the frost line. This depth may vary depending on the geographical location of the installation. In extreme cold climates, cables may need to be buried at greater depths where there temperatures are colder and frost penetrates to. A practical, engineering-focused guide to planning and installing underground fiber optic cables with the right cable structure, trench design and protection level for long-life, low-risk networks. Match trench method with the correct underground fiber structure (GYTS, GYTA53, GYTY53, micro-duct). Many people wonder: Can I bury my own fiber optic cable?
