PoE switch connection distance

Overview

The standard PoE switch distance limit is 328 feet, as defined by Ethernet transmission properties. In PoE (Power over Ethernet) technology, the Ethernet link between the Power Sourcing Equipment (PSE) and the Powered Device (PD) has a clearly defined maximum distance limit—100 meters (328 feet). This limitation is not arbitrary; it is defined by the IEEE Ethernet standards that govern PoE. The max PoE distance over Ethernet is 100 meters (328 feet) between a PoE power sourcing equipment (PSE) port and a powered device (PD). The most common PoE standard, IEEE 802. This means that a PoE switch can reliably supply power to a compatible device up to this distance. Beyond this, the power delivered to the end device may become. In this configuration, an Ethernet connection includes Power over Ethernet (PoE) (gray cable looping below), and a PoE splitter provides a separate data cable (gray, looping above) and power cable (black, also looping above) for a wireless access point.
