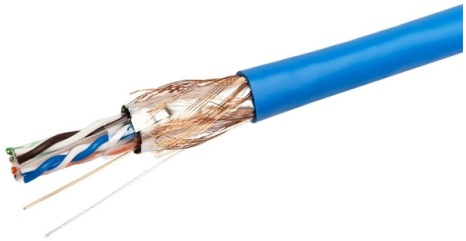
Precautions for using fiber optic cable channels



Overview

This guide highlights essential precautions including wearing protective gear, disconnecting power sources, handling fiber scraps carefully, avoiding face or eye contact, following regulatory standards, using adequate lighting, and keeping food or beverages away from work areas. Fiber optic technicians and telecom workers are in charge of installing, maintaining, and fixing fiber optic network systems. This can involve working with lasers, precision equipment, micro-scale glass fragments, heights, tools, and working near or with utility or electrical infrastructure. Following these. es conform to the guidelines expressed in the American National Standards Institute document (ANSI Z535) for hazard alert messages. Alerts are included in this instru d ath or serious i jury ectacles) conforming to ANSI Z87, for eye protection from accidental injury wh n ha dling chemicals, cab. Introduction This Program provides supervision, employees and safety managers with general safety rules, task safety procedures and best techniques for installation of quality fiber optic cable systems (cable handling, splicing, pulling, terminating testing and trouble shooting tasks). Eye Safety Optical sources used in fiber optics, especially LEDs used in premises networks, are of much lower power levels than used for laser surgery or cutting materials.
