Relay Protection Output Simulation Tester

Overview

RelaySimTest is a software solution for system-based protection testing with OMICRON test sets. Thanks to the enhanced testing depth, you'll. Closed loop simulation is the strongest method for proving protective relay settings because it tests timing, logic, and I/O behaviour under dynamic fault conditions. Whether you need to test a specific component or test an entire scheme, the F6150e is the proven solution to assess. The real-time digital simulator lab provides real-time dynamic simulation of system faults, sequence of events, and/or conditions such as power swings, open poles, out of step conditions and other fault and system conditions. You need the right tools. Protective Relay Test System, Relay Test Set, Relay Tester, Protection Relay Test Set, Secondary Current Injection Test Kit, 3-Phase Relay Tester In modern electrical power systems, the reliability of protection schemes is non-negotiable.
