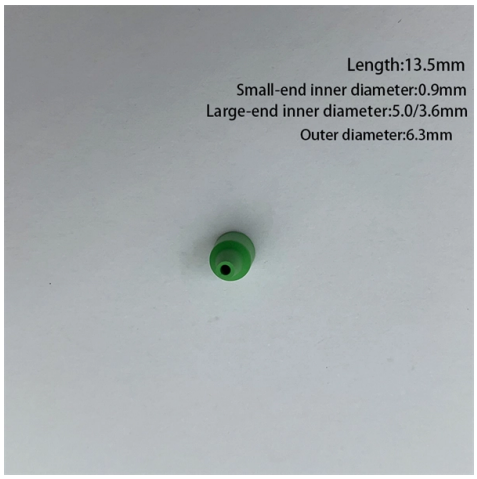
In EPN device networking



Overview

The Cisco® Evolved Programmable Network (EPN) Manager is a simplified and cost-effective device operation, administration, network provisioning, and network assurance management solution for today's converging packet and optical multilayer networks. Enable communication by transmitting and receiving data between devices. Allow devices to connect to networks efficiently and securely. Improve network performance by. A proven Unified MPLS based intellegent network architecture and solution for both fixed and mobile services A true programmable solution powered by Segment Routing, EVPN, XR Transport Controller, EPN Manager & Network Service Orchestrator Learn More! © 2017 Cisco Systems Inc. Powered by Jekyll &. EPN simplifies this process, making access to terminal devices (such as PLCs) more intuitive and automated, thereby lowering the technical barrier.
