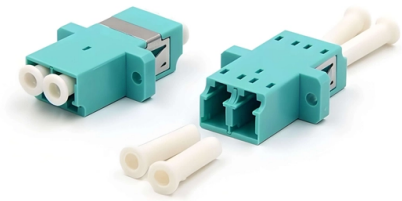
Single-channel fiber optic attenuator



Overview

Single-channel fixed attenuators offer attenuation of 0-60 dB in increments, while multichannel types have multiple fibers bundled together with individual attenuation levels. Thorlabs has a wide variety of single mode (SM), polarization-maintaining (PM), or multimode (MM) fixed and variable optical attenuators (VOAs). We offer SM and PM electronic VOAs that provide control of the output power with FC/PC or FC/APC connectors. for achieving a suitable signal level for a data receiver in a telecom system. FC/PC or LC/APC). We offer the industry's most extensive selection of fiber variable optical attenuators (VOAs), addressing all application scenarios with best-in-class performance and value. Our VOAs leverage advanced technologies including fiber-to-fiber direct coupling—free of lenses and coatings—for ultra-broad. Fiber optic attenuators are devices used to reduce or monitor the power level of a fiber optic signal.
