Small Diameter Optical Cable

Overview

Single-mode fiber optic cables, often referred to as SMF cables, utilize a small diameter core typically around 9 microns in size. The small core size allows for the transmission of a single mode of light, resulting in efficient and long-distance signal transmission. Our revolutionary, one-of-a-kind OptiTuff Mini Fiber Cable utilizes advanced, ruggedized thermoplastic material as a cost-effective, top-quality alternative to traditional metal armored cable. Compared to non-armored fiber cables, this all-dielectric armor provides superior durability and crush. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors. The new optical fiber design provides for performance consistent with G. Able to accommodate today's higher bandwidth demands with ease, TiniFiber is the world's smallest fiber optic cable.
