Recommendation ITU-T L. 25 deals with general features in relation to the maintenance and operation of optical fibre cable networks. This revision is intended to be appropriate for the current situation with respect to. Some people have suggested that fiber optic networks need periodic maintenance, including microscopic inspection of connectors and mating adapters and even insertion loss testing or taking OTDR traces. It could hurt an installer or get them sued by an irate network owner. Plan An efficient and sustainable data center operation and maintenance system first requires clearly defined tiered maintenance cycles and inspection mechanisms. Maintenance must treat these as managed assets with lifecycle expectations. Choose the right fiber optic cable type—single-mode for long distances and multi-mode for shorter runs—to match your network. A fibre optic maintenance contract is a formal agreement between a network owner (such as a telecom provider, ISP, or enterprise) and a specialist service provider.
