Switches with fiber optic inputs

Overview

A fiber-optic switch is a device used in fiber optics to route light from one or more input fibers to one or more output fibers. It can act as a simple on/off switch or a complex matrix switch with multiple inputs and outputs, such as 2×2 or even 64×64. The fiber has a very small core diameter of approximately 8. Discover the top 11 fiber optic switch modules for 2026 networking that can elevate your infrastructure—continue reading to find the perfect fit for your needs. If you're selecting fiber optic switch modules for 2026, I recommend considering options like the ipolex 10G SFP+ LR for high-speed links. With AXIS D8308 Fiber Aggregation Switch you can connect multiple Axis devices using fiber midspans over long distances. It also enables easy expansion by simply adding more fiber or network switches. The global optical switch market reached $5. 5 billion in 2024 and is projected to hit $12.
