Temperature Relay Protection Design

Overview

This reference design shows how to achieve overcurrent and overtemperature protection for a solid-state relay. TPSI3050-Q1 device integrates a laminate transformer to achieve isolation while transferring signal. IEEE/IAS/I&CPSD Protection & Coordination WG Chair Jacobs Canada, Calgary, AB rasheek. com IEEE Southern Alberta Section PES/IAS Joint Chapter Technical Seminar - November 2016 Protective Relays - Technical Seminar Nov 2016 - Copyright: IEEE 2 Abstract: Protective relays and devices. ower automation systems are an important prod-uct in the power equipment manufacturing industry. They are customarily divid-ed into secondary equipment for the transmission and distribution industry, and are responsible for protecting and cont olling the primary equipment of the pow-er grid and. DT-3 is used for temperature protection of transformers, or dc generators, and motors, usually rated 1 000 horsepower or more. The DT-3 relay is an adjustable contact-making ac or dc milliammeter, calibrated in degrees Centigrade.
