KVM Switch Location

Overview

Learn about the connection diagram for a KVM switch, which allows you to control multiple computers or servers with a single keyboard, monitor, and mouse.

Key Takeaways

A KVM switch can be found as a standalone hardware device, integrated into monitors, or installed in server rooms to manage multiple computers from a single keyboard, monitor, and mouse.

Physical Location

Standalone KV

M switches are typically box-like devices placed on or under a desk, or mounted in a server rack. They connect multiple computers to a single set of peripherals, allowing users to switch between systems using buttons, hotkeys, or on-screen displays. In server rooms or data centers, KVM switches are often rack-mounted to manage numerous servers efficiently, reducing clutter and simplifying control.

Built-in KVM Monitors

Some modern monitors include built-in KVM switches, allowing you to connect two or more computers directly to the monitor and share USB-connected devices like keyboards and mice without unplugging cables. These monitors typically have multiple USB upstream ports and video inputs (HDMI, DisplayPort, or USB-C) to support each connected computer. Usage EnvironmentsKVM switches are commonly used in: Offices: To control multiple PCs from a single workstation.

Server rooms and data centers: To manage multiple servers efficiently. Broadcasting, medical imaging, and command centers: Where operators need to access multiple systems quickly. Home setups: For users with multiple computers or laptops who want to reduce desk clutter.

How to Identify a KVM SwitchA KVM switch is usually labeled with multiple input ports for computers and output ports for the keyboard, monitor, and mouse. Some have physical buttons for switching, while others rely on keyboard hotkeys or on-screen display software to select the active computer. Monitors with built-in KVM functionality may have a dedicated button or automatically switch when changing input sources.

In summary, a KVM switch can be physically located on a desk, mounted in a server rack, or integrated into a monitor, depending on your setup and the number of computers you need to control. It serves as a central hub to streamline multi-computer management and reduce peripheral clutter.
