Lateral Displacement Type Optical Attenuator Enterprises

Overview

Join our free webinar about the trade-offs of the different types of beamsplitters and useful tips for using them for best possible performance in your application.

Key Takeaways

Several specialized enterprises manufacture and supply lateral displacement type optical attenuators, particularly in Europe, offering both fixed and variable solutions for fiber-optic and free-space applications.

Overview of Lateral Displacement Optical Attenuators

Lateral displacement optical attenuators reduce optical signal power by shifting the optical beam laterally relative to a fixed aperture or fiber core. This method allows precise control of attenuation while maintaining the signal's temporal waveform and mode structure. They are commonly used for receiver protection, power balancing in WDM systems, and laboratory testing of optical networks.

Key Enterprises and Suppliers

Several companies specialize in displacement-type optical attenuators, particularly in Eastern Europe and globally: Edmund Optics® (USA): A leading manufacturer of precision optics and optical assemblies, offering high-quality optical components suitable for lateral displacement attenuators.

MEETOPTIC

S: A photonics platform providing access to over 50,000 optical components, including displacement-type attenuators from verified suppliers. CHANCE4CHANGE GmbH & Co.

K

G (Germany): Specializes in contract manufacturing of optical components and systems for OEM applications, including custom optical attenuators.

Acal B

Fi Germany Gmb

H: Distributor of niche optoelectronic components, including optical attenuators for specialized applications.

DIAMOND S

A (Switzerland): Manufactures high-performance fiber optic interconnect solutions and related attenuator components.

Gigahertz-

Optik Gmb

H (Germany): Offers development, production, and calibration of optical radiation measuring devices, including attenuators.

AVARG

O Konrad Rutkowski (Poland): Authorized distributor and partner of RayTools AG, supplying optical attenuators across Europe.

Applications and Advantages

Lateral displacement attenuators are widely used in: Fiber-optic networks: For precise power control and balancing in DWDM systems. Laboratory and testing environments: To simulate signal loss and test receiver sensitivity. High-power laser diagnostics: Safely attenuating beams for measurement devices.

These attenuators can be fixed or variable, and many suppliers offer custom designs to meet specific optical, mechanical, or environmental requirements.

How to Source

Enterprises listed above provide both single-unit prototypes and high-volume production, with options for custom specifications. Platforms like MEETOPTICS allow direct contact with verified suppliers, facilitating procurement for research, industrial, or OEM applications. For further inquiries, contacting the supplier directly via email or phone is recommended to discuss customization, volume, and technical specifications.

Optical Attenuator: A Key Technology for Optical Signal Control

According to the above principle, the lateral displacement parameters of different losses can be achieved by controlling the lateral displacement method, and the required optical attenuator can be

Lateral Displacement Beamsplitters

Join our free webinar about the trade-offs of the different types of beamsplitters and useful tips for using them for best possible performance in your application.

Optical Attenuators | Keysight

Select the optical attenuator you need to simulate real-world optical link conditions, calibrate power levels, or automate signal conditioning in your optical test setup based on maximum attenuation and

Optical Attenuators – Buyer''s Guide & Supplier List | RP Photonics

This buyer''s guide for optical attenuators provides technical background, comparison of major types, selection criteria, and an overview of suppliers.

Programmable Optical Attenuator-DIMENSION

By adjusting the tunable attenuator and precisely controlling the input optical power, it is verified whether the electrical signal response of the detector under different

Attenuators

VIAVI offers the industry''s most complete range of optical attenuators for installation and maintenance of singlemode and multimode fibers and advanced, photonic-layer solutions for lab and production

Global Optical Attenuators Market Size, Growth Analysis & Forecast

The Optical Attenuators Market encompasses devices designed to reduce the power level of optical signals within fiber optic communication systems. These components are critical for

23 Optical Attenuator Manufacturers in 2026

This section provides an overview for optical attenuators as well as their applications and principles. Also, please take a look at the list of 23 optical attenuator

Attenuators | OZ Optics Ltd.

OZ Optics offers a broad range of both variable and fixed attenuators having key competitive advantages. All of our attenuators operate over the two standard wavelength bands, the C-Band and

Optical Attenuators Market Trend And Forecast 2035

The global optical attenuators market is experiencing steady growth as telecom operators, cloud providers, and enterprises expand fiber-optic deployments to meet rising data traffic and digital

A MEMS Variable Optical Attenuator with Ultra-Low Wavelength

Applications in broadband optical fiber communication system need variable optical attenuators (VOAs) with low wavelength-dependent loss (WDL). Based on analysis on the dispersion

Attenuators

Attenuators from VIAVI offer a complete range of power-balancing options, from fixed to variable optical attenuators in field, lab, and manufacturing environments.

Optical Attenuators – fixed, variable, VOA, high-power,

Optical attenuators are devices that reduce the optical power of a light beam by a fixed or variable amount. Key requirements include minimal effect on the beam

Variable Optical Attenuators

Variable optical attenuators are devices used to controllably reduce the optical power of a light beam. They are broadly categorized into bulk-optic and fiber-optic types. Bulk attenuators can operate

Fiber Attenuators

Product PortfolioAMS Technologies carries a broad range of fiber attenuators that provide fixed or variable attenuation of optical signals in optical fibers. Variable attenuators are available for manual

Optical Attenuator Types and Applications

The lateral displacement from the optical attenuator is a classical method, due to the magnitude from the lateral displacement parameters in the micron level, so generally do not have to
