Types of Huawei OLT Optical Modules

Overview

As optical fiber access nodes keep moving closer to end users, OLTs are closer to end users. Deployment scenarios are complex and diversified.

Key Takeaways

Huawei OLT optical modules, such as the GPON Class C+ HSC, are high-performance SFP-based transceivers designed for seamless integration with Huawei OLT systems, supporting long-distance GPON deployments.

Overview of Huawei OLT Optical Modules

Huawei OL

T optical modules are plug-in transceivers used in GPON fiber access networks. A common example is the GPON OLT Class C+ HSC module, which supports transmission distances of up to 40 km, offers high optical power, and superior receiver sensitivity. These modules are fully compliant with ITU-T G.

984. 2 Class C+ specifications and are compatible with Huawei OLT equipment such as MA5800, MA5680T, and MA5600T. They are optimized for high-density FTTH, FTTB, and other PON deployments, ensuring stable performance in demanding network environments.

Key Specifications

Module Type: SFP-based GPON transceiverTransmission Distance: Up to 40 kmOptical Power: High transmit power with superior receiver sensitivityStandards Compliance: ITU-T G. 984. 2 Class C+Compatibility: Huawei MA5800, MA5680T, MA5600T, and similar OLTsDeployment Scenarios: FTTH, FTTB, high-density PON networks Monitoring and DiagnosticsHuawei OLTs allow operators to monitor optical module status and performance using CLI commands: View module information: display transceiver [interface interface-type interface-number | slot slot-id] [verbose] This command shows module type, optical power, wavelength, transmission distance, and other parameters.

Check diagnostic information: display transceiver diagnosis interface [interface-type interface-number] Provides digital diagnostic monitoring (DMM) data, including temperature, voltage, current, and optical power levels. Interface status check: display interface Displays link status, interface rate, module type, and traffic statistics, which is essential for troubleshooting link abnormalities.

Certified Modules and Compatibility

Huawei recommends using Huawei-certified optical modules to ensure proper installation, signal quality, and device compatibility. Non-certified modules may cause: Installation failures due to nonstandard structureData bus abnormalities or interface damageIncompatibility with neighboring interfaces Certified modules undergo comprehensive verification, including installation/removal, transmit/receive power, signal quality, fault tolerance, EMC, and environmental performance.

Viewing Module Parameters

For installed modules, operators can check: Center wavelengthTransmission distanceSupported fiber typesReceive and transmit optical powerTemperature, voltage, and current These parameters help maintain network stability and optimize performance in GPON deployments.

Summary

Huawei OL

T optical modules, particularly the GPON Class C+ HSC, are designed for high-performance, long-distance fiber access networks. Using certified modules and monitoring them via Huawei CLI commands ensures reliable operation, accurate diagnostics, and compatibility with Huawei OLT systems like MA5800 and MA5680T.
