View all connected IPs on the switch

Overview

You can run the display arp command to view IP addresses and interfaces of servers directly connected to a switch. Is there a way I can find the list of IP addresses connected to a switch (may be Unix command), so that I can visit each desk, run a command, and check all the active IP addresses (computers) connected to that switch, and based on that I can find out to which switch that specific IP address is. Being able to scan your network and view all active IP addresses is really useful for understanding what's going on. In this comprehensive guide, I'll be sharing several methods you can use to see all the IPs in use on your network. All switches share the first 3 Octans. I have tried to use the CMD to find all devices IPs connected that are in range. From command line methods to advanced network scanning tools, I'll show you step-by-step techniques to uncover all IP addresses in any situation - whether you are working with Windows, macOS, Linux, or even larger enterprise networks.
