Key Takeaways

A single-core pigtail is a fiber optic cable with one optical fiber, featuring a factory-installed connector on one end and a bare fiber on the other for splicing.

Definition and Structure

A single-core pigtail is a short length of optical fiber designed to connect optical devices to a fiber optic network. One end has a factory-terminated connector (such as LC, SC, ST, or FC), while the other end is bare and prepared for fusion or mechanical splicing to a fiber optic cable in the field. This design ensures low insertion loss and high reliability on the connector side while allowing flexible integration into existing fiber infrastructure.

The "single-core" designation means the pigtail contains only one optical fiber, as opposed to multi-core pigtails that bundle multiple fibers together for higher-density connections. ApplicationsSingle-core pigtails are commonly used in: Optical Distribution Frames (ODFs)Fiber terminal boxesPatch panelsData centers and telecommunications networks They serve as a bridge between pre-terminated connectors and the fiber backbone, enabling permanent splicing with minimal signal loss. AdvantagesFactory-grade connector quality ensures consistent performance.

Flexibility to splice into any fiber system. Time and labor savings compared to field-terminated connectors. Space efficiency: the outer sheath can be stripped to reduce bending radius and occupy less space.

Key ConsiderationsSingle-core pigtails are available in single-mode (yellow sheath, 1310nm or 1550nm wavelength, long-distance transmission) and multimode (orange or aquamarine sheath, 850nm wavelength, short-distance transmission) types. Proper handling is essential to avoid looping or bending, which can increase signal attenuation. Connector types and polish (PC, UPC, APC) should match the equipment and network requirements.

In summary, a single-core pigtail is a fundamental component in fiber optic networks, providing a reliable, factory-terminated connection on one end and a splice-ready fiber on the other, ideal for permanent installations and efficient network integration.
