ODF fiber optic patch panel specifications

Overview

Outdoor fiber patch panels are specifically designed to be installed directly outdoors. They protect against rain, snow, dust, and wind. Outdoor fiber patch panels should carry a NEMA rating (a NEMA 4 and higher rating. With the growth of the fiber industry, a wide array of fiber optic patch panels have been developed to fit the many needs of these varying environments. If you already know what your project requires, check out our complete Fiber Patch Panel selection. What is Optical Distribution Frame An Optical Distribution Frame (ODF) is the central hub of your fiber optic network. It is usually a compact and structured framework composed of a steel shell and internal fiber splice tray as the main. Belden offers several Fiber Patching Systems. Full patching platforms include FX ECX for LAN environments, FX UHD for high-density fiber channels and the DCX System used primarily in data centers where high amounts of fiber connections and density are the key requirements, as in optical. An optical distribution frame—also known as a fiber distribution frame or fiber patch panel—is a structured enclosure that houses and manages optical fibers.
