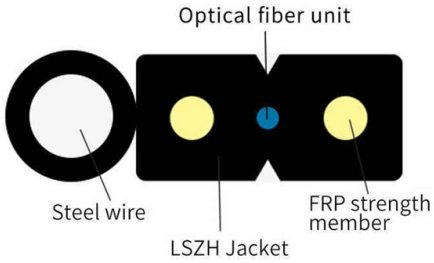
Red wire connected in the distribution box



Overview

Red wires are often known as “secondary hot” wires. That means they carry current like a black wire, but they usually work with another switch or outlet. When you see a red wire in a light switch box, it can. A distribution board or distribution box is where the main power supply is distributed to multiple loads. Its function depends on the specific wiring configuration: Here is the role of the red wine in the junction box electrical system in the following: Secondary Hot Wire: In. The red wire in a light fixture typically acts as a “switched hot” wire, meaning it carries power from the switch to the light fixture. Understanding its role is crucial for safe and correct electrical installations and troubleshooting. Color codes in wiring are like road signs.
