Overview

Easy to use: The electrical wire pulling tool is easy to install, saving time and effort, and is more convenient to guide wires, ensuring work efficiency and cable security.

Key Takeaways

Cable trays can be opened or cut using specialized shears, hand-powered cutters, and cut-off saws designed for metal or PVC materials.

Hand-

Powered and Manual ToolsProfile Shears and Metal Shears: Tools like the AK 3520 profile metal shear are ideal for cutting metal cable trays, tray lids, ladders, and other profiles. They can handle U-, C-, L-profiles, and thickened areas, providing precise, burr-free cuts for installation purposes (DRACO Tools).

PV

C Cable Tray Cutters: Hand-powered cutters such as the Helivivfy PVC cable tray cutter are designed for open-type PVC trays. They support precise 45° and 90° angle cuts, include adjustable rulers for measurement, and feature ergonomic handles for on-site use. These are not suitable for closed trays or metal trays to avoid tool damage.

Power ToolsCut-Off Saws and Circular Saws: Milwaukee offers a range of cable tray cutting tools, including cordless angle grinders and M18 FUEL™ circular saws. These tools are designed for precise cuts in metal trays, with ergonomic features, onboard storage, and overload protection systems. Specialized saw blades, including tensioned circular saw blades, are optimized for cutting metal, wood, or other materials.

Accessories and Ergonomics

Many tools come with blade locking mechanisms, adjustable sliders, and dual-scale rulers for accurate bulk cutting. Ergonomic designs, anti-slip handles, and lightweight construction improve safety and efficiency during installation.

Considerations

Material Compatibility: Always choose a tool compatible with the tray material (metal vs. PVC) to prevent damage and ensure safety. Cutting Angles: Tools that allow 45° and 90° cuts are useful for precise fitting in complex installations.

Maintenance: Regular blade maintenance is recommended to maintain cutting performance and safety. By selecting the appropriate tool based on tray material and installation requirements, professionals can efficiently open, cut, and modify cable trays while minimizing effort and ensuring clean, precise results.
