Single-mode polarization-maintaining fiber optic 9125

Overview

Polarization-Maintaining Single Mode Optical FiberThis polarization-maintaining fiber is optimized for fiber optic gyroscope (FOG) applications. It is desi.

Key Takeaways

Single-mode polarization-maintaining (PM) fibers, such as the 9125, are designed to preserve the linear polarization of light over long distances, making them ideal for precision optical applications. OverviewPolarization-maintaining fibers are single-mode fibers engineered to maintain a specific linear polarization state during propagation. Unlike standard single-mode fibers, PM fibers introduce systematic birefringence through stress elements in the cladding, creating two orthogonal polarization axes (fast and slow) with distinct phase velocities, which minimizes cross-coupling between polarization modes.

This ensures that linearly polarized light launched into the fiber remains in the same polarization state at the output. Fiber TypesPANDA fibers: Feature cylindrical stress rods parallel to the core, historically used in telecom and high-precision applications due to uniform birefringence over long lengths.

Bow-

Tie fibers: Use trapezoidal prism stress rods; functionally similar to PANDA fibers but with a different stress geometry. Both types are suitable for single-mode operation and are often interchangeable for most applications.

Key Specifications

Operating Wavelength: Typically ranges from 350 nm to 2000 nm depending on the fiber design. Mode Field Diameter (MFD): Defined at the $1/e^2$ power level in the near field; ensures proper beam propagation and coupling efficiency. Numerical Aperture (NA): Nominal values are provided for specific fibers; affects light acceptance and coupling.

Polarization Extinction Ratio (PER): High PER values (≥ 23–26 dB) indicate excellent polarization maintenance. Beat Length: Distance over which one polarization mode accumulates a phase difference of one wavelength relative to the other; critical for precise polarization control. Temperature and Bend Performance: Specialized PM fibers, such as those used in fiber optic gyroscopes, maintain polarization over wide temperature ranges and small coil radii.

ApplicationsSingle-mode PM fibers like the 9125 are widely used in: Fiber Optic Gyroscopes (FOGs): Require stable polarization for accurate rotation sensing. Laser Systems and Amplifiers: Maintain polarization for coherent beam delivery. Sensing Systems: High birefringence and low attenuation enable precise measurements in interferometry and LiDAR.

Telecommunications: Where polarization control is critical for certain modulation schemes.

Practical Considerations

Coupling: Light is conventionally coupled into the slow axis to reduce sensitivity to bending. Alignment: Proper alignment of the input polarization with the fiber axis is essential; tools like polarization analyzers are used for optimization. Material: Pure silica cores are often used to prevent photodarkening, especially at short wavelengths.

In summary, the single-mode PM fiber 9125 is a high-performance fiber designed to preserve polarization, minimize losses, and provide stable operation across a wide range of wavelengths and environmental conditions, making it suitable for precision optical and sensing applications.

Polarization-Maintaining Single Mode Optical Fiber

This polarization-maintaining fiber is optimized for fiber optic gyroscope (FOG) applications. It is designed for optimal performance over a wide temperature

Single-Mode Single Clad Fibers Eye Safe 9/125 Thulium-Doped

Eye Safe 9/125 Thulium-Doped Single-Mode Single Clad Fibers r is designed specifically for use in core-pumped cavities. As the fiber is polarization maintaining, it is also su

PM-TSF-9/125, PANDA-Type Tm-Doped Select Cutoff PM Optical Fiber

This single clad, small core diameter fiber is designed specifically for use in core-pumped cavities. As the fiber is polarization maintaining, it is also suitable for applications requiring linearly polarized output.

Polarization-maintaining optical fiber

It is possible to create a circularly birefringent optical fiber just using an ordinary (circularly symmetric) single-mode fiber and twisting it, thus creating internal torsional stress. That causes the phase

Product Configurator

Product Configurator for all single-mode and polarization-maintaining Fiber Cables. Please use the check boxes and sliders to select certain features and narrow down your search to the specifications

9/125 SingleMode Fiber

Field Components 9/125 SingleMode Fiber are available for fast shipping from over 250,000 custom RF Microwave Products. 9/125 SingleMode Fiber are available to ship worldwide in standard and custom

OZ Optics Online | FOBS-12N-111-9/125-SPP-1550

The input fiber is Corning SMF-28 single mode fiber while the two outputs are 8/125 polarization maintaining fibers. The fibers on all ports are 1 meter long, 900

Polarization-Maintaining Optical Fiber

Thorlabs'' polarization-maintaining optical fibers are available with operating wavelengths from 350 nm to 2.2 µm. Our selection includes PANDA, bow-tie,

Polarization-Maintaining Fiber
