The QSFP interface optical module cannot be unplugged

Overview

To remove the optical module, first unplug the fiber jumper, then flip open the pull-tab on the module and pull it out horizontally. Not sure on the Mellanox side, but is there an explicit 'enable' command on the Cisco end?

Have you checked to make sure the hardware is supported with the Mellanox and/or Connectx-3 system?

What all have you tried, so we can stop telling you what you already know?

If the Windows side is showing a. Installing a QSFP+ or QSFP28 Module You can install or remove QSFP modules in your switch without powering off the system. QSFP modules contain Class 1M lasers. Invisible laser radiation can occur when laser connections are unplugged. This device is compliant with IEC. SFF-8024 SFF Module Management Reference Code Tables : This specification provides codes for module identifiers, encoding values, connector types, extended compliance codes, host electrical interfaces and module media interfaces. The following figure shows the QSFP-DD transceiver, but the procedures outlined in this document apply to all pluggable transceivers. To soft reseat port 46 on PIC 0, first virtually remove the interface: Example output: Soft removing pic/port: 0/46!!! The interface can then be virtually plugged in again using the insert command:. To use an SFP optical module, first confirm that the host port is SFP-type. Align the SFP module with the optical port and insert it horizontally, pressing firmly until the bottom of the module engages with the locking spring of the optical interface.
