Light pen FC interface

Overview

Wide compatibilitySupports all types of adaptation from single-mode to multi-mode fiber, and is compatible with SC/FC/ST/LC 2. It is suitable for fault location and fiber recognition needs in various scenarios such as FTTH, data centers, and. Dual mode designSupports two modes of flicker and constant brightness, flexibly responding to different detection scenarios. The constant light mode is suitable for long-distance fiber tracking and connectivity verification, while the flicker mode makes fault points such as breakpoints and sharp. Karono 10mW (8-12KM)visual fault locator is used for the measurement in single-mode or multi-mode fibers. It locates fibers, finds. ● Practical Design: Small size and lightweight, pen-type design with pouch make it portable. Have any questions?
