Simple cable tray support

Overview

Cable Tray Supports: These include trapeze hangers, center-span supports, and wall brackets that anchor the entire system to the building structure (ceiling, wall, or floor). Selecting the right type of tray is critical for performance and safety. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resil- for each of these installation challeng-ience and safety. However, a cable support system can also be used, for example, to separate and arrange. These tray systems allow excellent ventilation and prevent sagging while routing. Hanging bars have a slotted strut. This is the role of the cable tray system—a structured framework designed to support and organize insulated electrical cables, control cables, and communication lines. Far superior to traditional conduit in many applications, cable tray systems offer unparalleled accessibility for maintenance. With the RS 60 cable tray installation system, we offer you the last installation type of the standard support construction, so that you can implement all installations required in the building project with circuit integrity maintenance on the basis of the standard support construction.
